 Printed for Prepared Customers from .csv file

Labels are supplied in rolls of 1,000. Simply peel & stick! Labels stick to most surfaces.

Shoe Recommendations: For easy scanning we recommend placement in the arch or side panel area of the shoe. Clean the area with alcohol prior to label placement for best adhesion. This should also be done on new merchandise to remove any residue that may have been deposited during manufacture. Allow alcohol to dry completely prior to label placement. After placement, labels should sit 24 hours prior to use to allow proper curing of the adhesive. Higher initial bonds can be achieved through increased rubdown pressure. Depending on how you maintain your inventory, you may label one shoe or both with unique or the same QR Code. Check with your software provider for recommendations.
